

A Letter From Our President

On behalf of Wildcat Formula Racing, I'd like to thank you for expressing interest in supporting our team. My name is Carlton Louie and I am the new President for the 2021-2022 competition year. Formula SAE is an engineering design competition where universities compete to design, build and race a formula style race car while being scored by a group of industry automotive engineers. Contrary to a

traditional Formula one racing series, our cars are critiqued and judged for their design, business plan, cost and efficiency.

For nearly over 30 years the University of Arizona has been designing, producing and racing these bespoke race cars. With the resources available we have become an established midfield program in the Formula SAE community and have the aspirations to break into the top fifteen teams at competition this year. With our extensive overhaul of our suspension and revamping our frame, aerodynamics, and powertrain we believe we have the car to achieve that goal.

Wildcat Formula Racing wouldn't be able to field a car without the generous support of our sponsors. WFR relies on our local community to manufacture our unique and precise parts, our industry partners to provide design and simulation software and our donors to be able to fund the day to day running of our team.

- Carlton Louie
