

About Us and FSAE

Formula SAE is a competition series in which teams worldwide compete in events which demonstrate their engineering capabilities through the design and production of a formula-style car. Part of the challenge of this engineering competition includes obtaining the funding to produce the best possible version of the designed vehicle.

The competition itself consists of two categories of events: knowledge and validation. In the knowledge events, we are tasked with demonstrating the design behind our car from the technical choices made, to the cost analysis and business models that we have conducted and planned. In the validation events, the production of our design will be graded based upon technical inspections along with test runs to gauge performance of our vehicle.
